## **ICT AND TEACHING: A NEW PARADIGM FOR MEDICAL LIBRARIANS... AND MEDICAL STUDENTS**

### **Abstract**

Information and Communication Technologies (ICT) are spreading very fast in the health field. ICT have a major impact on medical librarians. They hold a very important and growing role for „info-mediation”. This info-mediation used to be face to face. Now, it occurs using ICT, and mainly Internet tools, such as Email, videoconferencing etc.

Medical librarians also play a very important role in training medical professionals and medical students. Here again, ICT may multiply their impact, e.g. using audio PowerPoint available on the Internet (URL: [http://www.univ-rouen.fr/82005912/0/fiche\\_DPM\\_\\_pagelibre/](http://www.univ-rouen.fr/82005912/0/fiche_DPM__pagelibre/)).

Paradoxically, medical librarians are ready to adopt this new paradigm... while medical students and medical professionals are far from it.
