LINGUISTIC EVIDENCE FOR THE INDO-EUROPEAN PANTHEON*

I. GENERAL FEATURES OF THE INDO-EUROPEAN RELIGION

- (A) The Indo-European religion is polytheistic, i. e. it connects plurality of worships and cults peculiar to any group and any place.
- (B) It is a pagan or rustic religion, which reflects some variety of the common people.
- (C) It is plural and various. This religion is by nature broad-minded, being far from propagating its own faith. Any group preserves jealously its own deities, beliefs, rites and religious formules. In a sense this religion can be determined as esoteric and initiatory. It has mythes and symbols, but it knows no dogma.
- (D) It is a religion of work, but not of faith. The traditional rites and duties of their own social standing are engagements essential to confessors, but the affection does not figure prominently in their faith.
- (E) This religion is political for the sake of its frames, which are frames of different ethnic units. It is also a religion of commanders rather than that of priests.
- (F) It is highly tolerant and its confessors are devoid of any fanaticism, but both „superstition” and individual magic are despicable, thought sometimes they are practised.
- (G) Indo-European deities are comprehended as personal beings, whose nature cannot be precisely determined. According to peoples and epochs their nature lies less or more near the human nature, as it can be recognized from theonyms.

* This is a somewhat modified text of our paper read at the 26th Linguistic Colloquium (Poznań, 18–21 September 1991), cf. our abstract published in the Conference materials: *26. Kolokwium lingwistyczne. Język – komunikacja – informatyka, 18–21 09 1991, Poznań*, ed. J. Darski, Z. Vetulani, Poznań 1991, pp. 55–56.

In his *Les Indo-européens* (Paris 1981) Jean Haudry lists four basic types of the Indo-European divine names (theonyms):

- a) proper names of phenomena (e. g. fire, dawn), of heavenly bodies (e. g. sun, moon) and abstractive names of social facts (e. g. contract, oath);
- b) proper names (derived units, complexes and compounds with a possessive meaning) denoting a „lord” of specific phenomenon, being or social fact, e. g. Lat. *Silvanus* ‘lord of forest’, OPrus. *Vejopatis* ‘lord of wind’;
- c) personal names non-motivated (e. g. Ved. *Índra*-) and motivated denoting a doer (e. g. Awest. *Vərəþrayna*-);
- d) compounds expressing a relation of kinship (e. g. „daughter of the Sun”).

Three later groups (b, c and d) refer *explicite* to personal beings, the former *implicite*, though their primaeva nature has not been forgotten. The poets use the above ambivalency, and Vedic *Mitráḥ* ‘the Contract’ and *Agnih* ‘the Fire’ are equally personal as *Índrah*. The supreme god of the Indo-European pantheon, namely *Dyéws* ‘the Sky’, is originally connected with the title (sobriquet) *pātér* ‘father’. His divine daughters (e. g. *Āwsós* ‘the Dawn’) are often denominated as *Diwós dhugätér* ‘daughter of the Sky-God’, cf. Vedic *Diváḥ duhitá*, Greek Διός θυγάτηρ. These resemblances show evidently that both the personified pantheon and the relationship between deities must be of Indo-European depth.

II. PRINCIPLES AND PURPOSES OF OUR RESEARCH

Linguistic studies today successfully combine the methods and concerns of analytical structuralism with genetic evolutionism. A principal criterion of the Indo-European character of deities is not only a striking agreement of their functions (as given by Georges Dumézil in his neocomparativism), but also, if not essentially, their comparable names preserved independently in each individual mythology. From the time of Albert Kuhn (1850), the identity of the Vedic god *Dyáus pitá*, the Greek *Zeós πατήρ*, and the Latin *Iuppiter*, was firmly established, cf. No. (10). In this case the comparative material is especially ample, but we must bear in mind that this god headed the Indo-European pantheon. It is comprehensible that we cannot expect linguistic evidence for numerous minor-rank deities to be as rich as that for the principal god.

Prof. Dr. Ignacy Ryszard Danka, who is the head of the *Indo-European Lexicon Project*, persuaded us to find linguistic evidence for the Indo-European pantheon and to reconstruct the primitive names of its deities. Of course, this evidence will be treated as a constituent part of a new comparative and etymological dictionary of the Indo-European protolanguage.

Our paper provides an alphabetical list of numerous Indo-European items, reconstructed on the basis of evidence taken from religions of various Indo-European peoples. We based our list on etymological resemblance and on the similarity of functions performed by these deities in particular religions. Of course, our evidence is only tentative; we include here not only the names of deities with an established etymological tradition (such as for ex. No. 10: *Dyéws* or *Dyéws pätér* m. 'Sky-god [the Father]'), but also a number of deities seldom discussed in comparative studies of religions (as for ex. No. 6: *Bhád-s* f. 'goddess of happiness' // *Bhadéws* m. 'god of happiness'), or with names so far unclear from the etymological point of view (as for ex. No. 25: *Marút-s* m. 'a storm- or war-god').

Considering the very restrictive conditions on the size limits of the contribution for A. M. Komornicka's *Festschrift*, we refrain from giving our own commentaries on particular deities as well as from providing an extensive bibliography.

For reasons of convenience, we use the notations ē ã ö instead of the „hieroglyphic signs” ə₁ ə₂ ə₃ (as given in the traditional symbolism) to denote e/a/o- colouring vocalized laryngeal.

III. A ‘TENTATIVE’ EVIDENCE FOR THE INDO-EUROPEAN PANTHEON

A Ä Å

(1) *äysós* m. 'god' / *ays-* 'deity (of healing)' (originally perhaps 'deity of the third function in Dumézil's sense')

Additional Remarks. After this paper was completed by the end of 1992, numerous valuable publications on the Indo-European religion have appeared, among them *Słownik mitologii ludów indo-europejskich* [A Mythological Dictionary of the Indo-European Peoples] by A. M. Kempiński (Poznań 1993, 472 pp.) and *The Gods of the Celts and the Indo-Europeans* by G. S. Olmsted (Budapest 1994, 493 pp.). As a result our knowledge of the Indo-European pantheon has broadened and it has become possible to establish and reconstruct a number of further Indo-European divinities. Unfortunately, however, the results of our recent observations and conclusions could not be included into the present paper. They will be published separately as „New evidence for the Indo-European pantheon” in the nearest future.
