PROQUEST

The Importance of Evidence-based Nursing and Non Journal Content in Aggregation

With an increased focus on healthcare quality and rising costs, evidence-based education has been strongly supported by leading authorities in Nursing

INTEGRATING EVIDENCE-BASED PRACTICE
INTO A PEDIATRIC NURSING COURSE
Debra Ann Mills, RN, M.S.
Brigham Young University College of Nursing
Provo, Utah

Purpose/Aim: To describe how evidence based nursing practice concepts were integrated into an undergraduate pediatric nursing course.

Rationale: Recommendations from various nursing organizations/projects such as the American Association of Colleges of Nursing, National League for Nursing Board of Governors and the National Nursing Education Study (funded by the Carnegie Foundation) continue to emphasize the need for nurse educators to integrate evidence-based practice into nursing curriculum. Critical thinking, personal reflection, and reflective writing linked to nursing practice, are integral components in understanding and using evidence based nursing practice concepts.

Description of the Undertaking: A variety of strategies were considered when planning

As a result, evidence-based curriculum has become widely accepted as crucial to quality nursing programs

Nursing 317

Evidence Based Practice. N205, N217, N221, N313 (Semester I courses); Concurrent N345, N405. (2). Lecture.

The primary goal of this 2-credit core course is to promote an evidence-based approach to nursing practice. Evidence-based

NURS 360 Concepts, Processes and Skills for Evidence-based Nursing (3 lecture credits; 1 lab credit). Pre-requisite, admission to program. This course focuses on

understanding basic nursing concepts. The development of communication, teaching, and psychomotor skills are emphasized in conjunction with nursing process.

T NURS 403 Introduction to Research in Nursing (3) QSR

Describes the systematic steps of the research process. Introduces approaches, frameworks, and common nursing problems. Emphasizes integration of research findings to establish evidence-based nursing practice. Required background: introduction to statistics; prerequisite: T NURS 350.

NJSC 322	Introduction to Nursing Research and Statistics for Evidence-Based Practice	4
-------------	---	---

What is gained from evidence-based practice?

Industry Benefits

- Utilisation reduces the overall variability of practice (based on following best practices)
- Cost savings (which flow from appropriate product use and best health outcomes)
- Improves healthcare outcomes in general

User and Student Benefits

- Users can develop more effective discussions of current approaches to nursing practice
- Builds the ability to better critique current nursing strategies
- Gives users skills to assist in clinical audits for quality improvement
- Resource familiarity allows for better use of online evidence-based programs
- Maximises users leadership potential in nursing

What does The Joanna Briggs Institute (JBI) say about Evidence-Based Nursing?

“Simply defined, **evidence-based nursing** is the combination of individual clinical or professional expertise with the **best available external evidence** to produce practice that is most likely to lead to a positive outcome for a client or patient.”

“The **core** of evidence based practice is the **systematic review** of the literature on a particular condition, intervention or issue.”

What constitutes a high quality evidence-based systematic review?

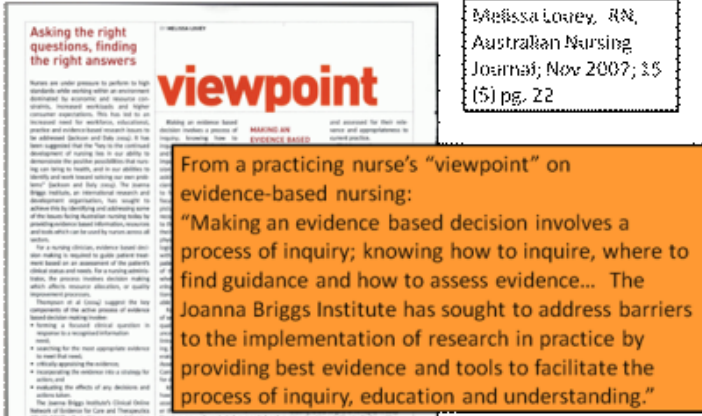

According to JBI systematic reviews use the following steps:

1. Developing a rigorous proposal or protocol
2. Stating the questions or hypotheses to be pursued in the review
3. Identifying the criteria to be used to select the literature
4. Detailing a strategy to identify all relevant literature
5. Establishing how the quality of primary studies will be assessed or critically appraised and any exclusion criteria based on quality considerations
6. Detailing how data will be extracted from the primary research regarding the participants, the intervention, the outcome measures and the results
7. Setting out a plan of how the data extracted will be

Why the Joanna Briggs Institute makes a difference

- Academic libraries requirement for evidence-based nursing resources:
 - “*Every curriculum is now focusing on information that is evidence-based*”
 - “*Our nursing library has just been reaccredited...evidence-based resources are required for accreditation*”

- Difficult to find information that thoroughly evidence-based and focused on nursing and allied health:
 - “There are several databases which focus on evidence-based medicine, but it is hard to get good evidence-based nursing information.”
 - “We have been looking for evidence-based nursing resources, but haven’t found anything appropriate”

Other Resources Available from JBI

ProQuest users are also be given access to two tools on JBI's own platform:

RAPid is an on-line critical appraisal of evidence training program

SUMARI is a developing software package designed to assist health and other researchers and practitioners to conduct systematic reviews.

Users are authenticated through to the JBI platform by clicking on a JBI logo provided on the ProQuest Nursing & Allied Health Source database

Cultural Competency Case Studies

An registered nurse is treating a 3 year old Laotian boy for an asthma attack discovers round abrasions on the child’s chest and trunk and asks the parents how they occurred - the parents are silent. The nurse suspects abuse and files a report with Child Protective Services.

Using the cultural competency reports from CultureVision on ProQuest, we can determine:

Hmong/Laotian

Treatment Issues > Traditional Treatments

- Traditionally the Hmong and Lao will call on Shamans, herbalists, and/or "soul callers" to restore the souls of a sick person.
- Some Hmong Lao do not understand Western concepts of mental illness and will instead attribute the patient's behavior to the presence of evil spirits. A Shaman will be used to drive out the evil spirits (Siefert 2001).
- Generally, Hmong and Lao eat hot/warm foods when ill.
- **Traditional treatments**
 - Hmong herbalists make teas or poultices out of plants, and treat a variety of illnesses, including impotence, joint pain, abdominal pain, headaches and diarrhea (Her 2004).
 - Hmong and the Lao use **therapeutic massage** and pinching to cure common ailments such as muscle aches and fevers. Like herbalists and shamans, massagers are highly skilled (Her 2004).
 - **Extinguishing an oiled corn is heated and rubbed on certain parts of the body to release the "wind" that causes illness and is used to treat nausea, loss of appetite, headache, muscle soreness, and dizziness. It is not unusual for the process to leave marks on the body (Hoore 2005).**
 - **Lepping** Using vacuum inside a glass cup to bring energy to an area.

Some of the traditional treatments may leave marks that might be misinterpreted as abuse.

Vietnamese women at a hospital in Michigan were continually becoming severely dehydrated shortly after giving birth despite the fact that nurses were dutifully bringing them ice chips and cold water.

Using the cultural competency reports from CultureVision on ProQuest, we can determine:

Vietnamese

Labor, Birth & After Care > Birth Recuperation

- The postpartum period is considered to be a very important time in life for a woman called "lying-in" period (Orhani 2003).
- The postpartum period may be considered a "cold" state, and new mothers may believe it best to:
 - stay in the house
 - avoid cold foods and drinks*
 - avoid wind or cold air/drafts
 - not bathe or shower
 - not use ice packs
 - abstain from physical work and excessive pleasurable activities (e.g., sex)
- The mother-in-law may be very involved with the new infant and the new mother's recovery. She should be included when caring for the mother and during education sessions.
- Some women do not have sexual intercourse for months following birth, believing that it is best to allow their bodies to recover and heal from pregnancy.

*Note: not wanting cold beverages may have implications in preventing dehydration in new Asian mothers. It is important to inquire about preferred temperature of beverages.

High Impact Content

Imagine if all of this Nursing information could be reinforced with video training now it can ... with exclusive newly added video training in ProQuest Nursing & Allied Health Source

Enhance your student learning with training videos for Nursing from Medcom-Trainex and HCPro

- Meets the call for video resources in Nursing
- 300+ videos provide visual support for more efficient and effective training
- Bridges the gap between theory and practice
- **Available exclusively on aggregation to libraries through ProQuest!**
-

Nursing Reference Ebooks

- Over 40 nursing reference ebooks from Springer Publishing Company and HCPro including:
 - Encyclopedia of Nursing Research (2006 *AJN* Book of the Year Award winner)
 - Evidence-Based Protocols for Managing Wandering Behaviors (2007 *AJN* Book of the Year Award winner)
 - Teaching Cultural Competence in Nursing and Health Care: Inquiry, Action and Innovation (2006 *AJN* Book of the Year Award winner)
 - Teaching Evidence-Based Practice in Nursing: A Guide for Academic and Clinical Settings (2006 *AJN* Book of the Year Award winner)
- Presented on ProQuest in book chapters

ProQuest Nursing & Allied Health Source delivers more resources than any other Nursing database

What do our customers say?

- *This resource is invaluable for my students...*
- *Those who are off-campus...can easily gain access to full textarticles without having to visit the library*
- *...on-campus students ...don't have to wade through printed journals to find the information they need*
- *...very easy resource to use...*
- *...little training is require...*
- *many of my students are mature people [with]...little recent experience of education...not very confident with IT*
- *...academics in the School of Health Studies also use this resource, and are happy to recommend it to their students.*

Shirley Ward, Subject Librarian for Health Studies,
Bolton University, England

“It is incredibly comprehensive and easy to use. I found the use of the term, paths, to be very applicable as I clicked on different menus and found much more than I had expected. This is a resource that would be infinitely valuable for students and educators ...”

Associate Dean, Faculty of Nursing,
Canadian University

“I am very happy with electronic journal services from ProQuest. We just had a free trial of their product „Nursing & Allied Health Source... We are long-time subscribers to Health & Medical Complete, and my library users are very happy with the product...

My contact with the sales and service reps has been a pleasure, compared to some vendors. I urge any librarian to review the ProQuest products, contact their sales rep, and set up a free trial to review products from ProQuest.”

“We also subscribe to ProQuest Nursing Journals database - it has a lot of full-text journals and we have it linked to LinkOut as well. “
